Based in Novosibirsk, Russia

Open to relocation: Yekaterinburg, Moscow, St. Petersburg; occasional business trips

Desired position

Product Designer

Employment: full-time · Work format: remote or hybrid

Work experience — 8+ years

Dec 2023 – Present

Gazpromneft-Noyabrskneftegaz

Product Designer

Enterprise B2B/B2E systems for planning, production control, monitoring, and document management.

– I independently manage design across several internal products. I conduct UX research, design user flows and information architecture, test prototypes, and evaluate outcomes after release.

– Redesigned navigation and complex forms in a production control system. After analyzing user errors and task completion times, I reworked the interface structure. The main task became 8 times faster after release.

– Designed a planning interface combining nested data structures with context-preserving tables. Compared several prototypes with users. The new approach increased engagement, and plan creation took 3 times less time in testing.

– Proposed expanding a document management product with analytics after user interviews. Made the case for its business value and secured approval for development.

– Help define MVP scope and development priorities based on research. Discuss solutions with stakeholders and developers, account for technical constraints, and explain design decisions.

– Review implemented interfaces, conduct design reviews, and adjust interaction logic when needed, including solutions proposed by developers.

Jan 2016 – May 2021

SWEET.TV (streaming service)

Product Designer

B2C streaming service for Web, iOS, Android, and Smart TV.

– Designed user flows for the streaming service, including content discovery, playback, TV navigation, and subscription management. Improved existing interfaces using user research and product analytics.

– Redesigned the account area and simplified subscriptions, payments, and adding bank cards. Google Analytics showed improvements in subscription conversion and retention.

– Changed the flow for purchasing paid TV channels. Made payment and returning to viewing easier. Assessed conversion through product metrics and usability through user feedback.

– Independently developed and tested product hypotheses, ran UX research and A/B tests, and analyzed behavior, conversion, and retention in Google Analytics.

– Built a cross-platform UI kit with reusable components, making it faster to prepare designs and easier to keep interfaces consistent across platforms.

– Contributed to product decisions with the Product Owner, worked with developers, reviewed implementation, coordinated designers, assigned tasks, held design reviews, and helped onboard new colleagues.

Professional training and courses

2025

Business Analyst

Yandex Practicum · Business Analysis

2017

Specialized training (since 2015)

STEP IT Academy · Computer Graphics and Design

Product Design · UX/UI Design · User Research · User Interviews · Usability Testing · Information Architecture · User Flows · Interaction Design · Prototyping · Wireframing · Design Systems · Figma · A/B Testing · UX Analytics · CJM · Accessibility

Additional information

About me

Product Designer with 8+ years of experience in B2B/B2E and B2C. I work on enterprise products in IndTech, DataTech, LogTech, RegTech, and other fields. My earlier experience includes designing the cross-platform SWEET.TV streaming service. I independently lead design across several products and help set development priorities based on research.
